SKILLS

- C/C++
- HTML
- CSS
- JavaScript
- React
- TypeScript
- React Native
- Matlab
- Linux
- Git
- Object-Oriented Programming
- Problem-solving
- Adaptability & Fast Learner
- Attention to Details
- Analytical Thinking

HOBBIES

- Wildlife Photography
- Hiking
- Web Development

LANGUAGES

- Romanian (native)
- English (C1)

PROFESSIONAL SUMMARY

Second-year student at Faculty of Automatic Control and Computer Science, passionate about software engineering and modern Web and Mobile Development. Building upon a solid academic foundation in C++ and algorithms, I am currently focusing on highly demanded industry technologies, such as React and TypeScript, to build responsive and scalable applications. I am eager to apply my knowledge in a practical environment and continue growing as a developer.

EDUCATION

BACHELOR’S DEGREE - Faculty of Automatic Control and Computer Science (University of Politehnica Bucharest) **2024–2028**

"ION CREANGA" NATIONAL COLLEGE (BUCHAREST) **2020–2024**
◊ Natural Science

PROJECTS

JWC QUIZ | REACT NATIVE **April 2026 - Present**

Currently developing a cross-platform educational quiz application focusing on birds, insects, and herpetofauna for a small organization using React Native. Implementing interactive core mechanics, intuitive UI design, and robust state management to deliver an engaging user experience. The project involves working closely with the organization’s requirements, with an official release scheduled for July 2026.

PERSONAL PORTFOLIO | REACT, TYPESCRIPT **May 2026**

Developed a responsive personal portfolio website to centralize and showcase my academic and personal projects. Built a modular front-end architecture using React for reusable components and TypeScript to ensure strongly typed, maintainable code.

INTERACTIVE TO-DO WEB APP | HTML, CSS, JS **January 2026**

Developed a dynamic web application for task management. Implemented core features like adding, inline editing, deleting, and filtering tasks (All/Active/Completed). Built a clean, responsive UI with custom CSS and real-time state updates using JavaScript.

SMART LIGHTING CONTROLLER | ARDUINO, C++, OOP **January 2026**

Built a smart lighting prototype that activates LEDs based on real-time motion detection and ambient light levels. Structured the software architecture using C++ and OOP concepts to ensure efficient hardware-software integration and precise timing control.

COURSES & EXTRACURRICULAR ACTIVITIES

- WEB DEVELOPMENT COURSE - HTML, CSS, JS | Hackademy **Oct 2025 – Jan 2026**
- WEB DEVELOPMENT COURSE - REACT, TYPESCRIPT | Hackademy **March 2026 - May 2026**
